Wire rope construction

Many innovative ideas on board – as well as on land – can be realized with modern wire rope constructions. Our SVB-Service customizes wire ropes dimensionally accurate according to your wishes and needs. We offer innovative design solutions for various applications. On board – for railing, awnings, antennas systems, standing and running rigging. On shore – for the design of stair railings, canopies and rope structures, plant supports and bracing.

SVB helps you to plan your ideas and put them into practice! Our customer service is happy to help you and is at your disposal for guidance and further information.

Wire rope

SVB manufactures complete rigging, shrouds, railing wires and other cable constructions according to your wishes. Please determine the length needed with a thin steel wire (rack-free) from one drawing point to another drawing point. According to the connection we offer milling for terminals

for wire size from 3mm to 16mm, which we produce with our modern hydraulic press. For thimbles we use pressings with copper terminals (wire-Ø 2-10mm). With shrouds and railing wires, the wires are supplied in the specified length with about 2/3 turned out clamps.

To tighten your wires, the wire ropes are supplied with about 2/3 turned out clamps.

Please select your desired items with the help of the table below and select them with a cross. When we have received the filled in data sheet, we will contact you via phone in order to work out a detailed and customized solution with you.

Possibilities on board:
