

Code: 50023/14AB

Automatic A/B dock switch AGC DVB-T2 TV amplifier

NEW

Power supply: 12/24Vdc, 100mA max.
Gain: 20dB
Frequencies: 87,5/774MHz
1 x antenna input
1 x dock input
2 outputs (TV/TV or TV/DAB-FM radio)
LTE filtered

Automatic A/B
dock switch amplifier

Automatic gain
control amplifier

Increased performance
compared to manual
amplifier

1 antenna input
+ 1 dock input

2 TV outputs or
1 TV + 1 FM/DAB outputs

More rugged
case

Compatible with
all Glomex antennas
without in-built amplifier

Glomex has developed the new automatic A/B switch amplifier (code 50023/14AB).

When you moor your boat and there is a dock TV antenna, you can easily connect your onboard TV system to the dock TV antenna. When the amplifier finds the dock TV signal it automatically switches the signal reception from the Glomex TV antenna to the dock TV one.

The 50023/14AB amplifier is compatible with all Glomex antennas without in-built amplifier such as Mizar, Altair, Talitha, Nashira and Adhara.

Moreover, the automatic A/B switch amplifier has a new case, more rugged than the standard Glomex AGC amplifier. However, as the standard Glomex AGC amplifier, it:

- 1) increases the performances on TV signal reception compared to the manual amplifiers;
- 2) automatically controls the signal gain with 2 TV outputs or 1 TV and 1 FM/DAB radio output;

Thanks to the Glomex AGC amplifier you have only to turn on the TV, stay comfortably seated on the sofa and enjoy your favourite programs. With conventional amplifiers, you have to manually adjust the TV signal gain by lowering the amplification when the signal is high and by increasing the amplification when the boat is at sea and far from the TV transmitter. With the AGC amplifier, everything will happen automatically and it can be placed in a hidden location inside the boat.

Compatible Glomex DVB-T2 TV antennas

MIZAR

TALITHA

ALTAIR

NASHIRA

ADHARA
